

EasySave

User Documentation V1.1

How to use the software?

I – Getting started

Overview

The main menu will appear when you launch the application:

From here, you can select an option by typing the corresponding number.

You can either:

- Launch sequential saves
- Access the work save list
- Create a save work
- Access the settings
- Exit

II – Options

[1] Sequential saves

Here, you can launch every save back-to-back.

[2] Save work list

In this menu, you will be able to see every save work slot. You can also either:

- Launch a savework
- Delete a savework

[3] Create a savework

In this menu, you will have to choose a name for the save work, as well as a source path (ex: C\:\FileToSave) and a target path (ex: C\:\NewFile). You will also have to define its type: complete or differential.

A complete save work will copy every file in the source folder to the destination folder.

A differential save work will only copy the files that have been added/modified since the last time you saved.

[4] Settings

In the settings, you have two main options. You can:

- [1] Change the language of the application: you can choose between French or English.
- [2] Change the logs format : you can choose between JSON and XML
- [3] Go back to main menu

[5] Exit the application

If you type 5, the application will immediately close.
