EasySave

User Documentation

How to use the software?

I – Getting started

Overview

The main menu will appear when you launch the application:

From here, you can select an option by typing the corresponding number.

You can either:

- Launch sequential saves
- Create a save work
- Access the work save list
- Access the settings
- Exit

II – Options

[1] Sequential save

Here, you can launch every save back-to-back.

[2] Create a save work

In this menu, you will have to choose a name for the save work, as well as a source path (ex: C\:FileToSave) and a target path (ex: C\:NewFile). You will also have to define its type: complete or differential.
A complete save work will copy every file in the source folder to the destination folder.
A differential save work will only copy the files that have been added/modified since the last time you saved.

Note: you can only create up to 5 save works.

[3] Save work list

In this menu, you will be able to see every save work slot. Therefore, you can check if a slot is available or not.

[4] Settings

In the settings, you have two main options. You can:

- [1] Change the language of the application: you can choose between French or English.
- [2] Change the location of the configuration file: you can set a different path leading to where the different save slots will be stored.

    Note:
    The configuration file location is currently set to:
    C:\Users\%username%\Downloads\ConfigPath\

[5] Exit the application

If you type 5, the application will immediately close.
